From link shared to identity verified

Where Verification Slows Down

Verification feels like a big project

Start with a lighter setup that costs less and skips heavy integration.

Every app download is a reason to drop off

Skip the install. Verify customers on WhatsApp, where they already are.

Missed verifications become compliance risk

Scattered checks make it hard to prove who was verified and when.

Set Up in Minutes, Verify in Seconds

1

Create Workflow

Tailor the verification flows to your needs: choose your checks, add your branding, and save. Save and reuse it across every campaign.

2

Start campaign and share link

Launch a campaign and generate unique verification links, each tied to one phone number. Share through any messaging app, with no forwarding or reuse.

3

Identity verification

Recipients open the link in their mobile browser and complete verification in under a minute, with no app download required.

4

Track result

Track verification status in real time from one dashboard. See completed and pending checks, and identify who needs follow-up.

VIDA's Tech Stack Behind Every Link

From deepfake detection to document fraud checks, every layer is built in and certified.

1. **Link Security (Phone Pinning)**
   One link, one person. Non forwardable.
2. **Liveness Check**
   Confirms real customers, detects deepfakes
3. **ID Fraud Shield**
   Flag suspicious and tampered devices before a result is returned.
4. **Identity Document Verification**
   Catches fake ID documents
5. **Official Database Check**
   Validates against national population records
6. **Certified Identity**
   Every result comes with a digital certificate, legally recognized and issued by a licensed Certificate Authority.

One Link for Every Scenario your Team Faces

Financial Services

Verify customers instantly, wherever they are

Send a WhatsApp link. Customers verify on their own phone, and your team sees results and certificates live.

Service Providers

Know who's renting before the keys change hands

Send a link before pickup. The renter verifies from their phone, with no paperwork at the counter.

Telecommunication

SIM card registration without the counter bottleneck

Send a link. The customer completes a selfie and ID check, and your team sees the status live.

Digital Platform and Others

Drivers verified before their first order

Verify every driver from a link before their account goes live. No manual review, no backlog.

Built for the Rules Where You Operate

1. **Indonesia**
   Personal data and face are checked directly against Authoritative Source. Certified liveness detection blocks spoofs.
2. **Malaysia**
   MyKad, MyPR, MyKAS, MyTentera, and passport checks with biometric and liveness stop spoofs and catch forged documents in remote onboarding.
3. **Singapore**
   Confirm identity with Singpass, the app every Singaporean already has.
