VIDA

One SDK.
Every layer of fraud defence.

Document, biometric, and device intelligence in a unified flow.
Assessed under BNM RMiT.

Assessed under BNM RMiT
Annex 10 cloud review + eKYC PAD

PAD Level 3
ISO 30107-3 biometric spoof resistance

ISO 27001 & ISO 27701
Security & privacy management certified

Licensed Certificate Authority
Indonesian Ministry of ICT · WebTrust

62M
Digital IDs issued

220M+
Liveness checks performed

220+
Institutions across SEA

PAD Level 3
Liveness detection certified

Why VIDA

Six things the field can't put together.

Built for SEA region
Trained on local ID documents, local fraud patterns, and local regulations from day one

Local presence, regulatory roots
On the ground in Indonesia, Malaysia (KL) and Singapore. CA lineage grounded in regulated identity products.

In-house fraud technology
Our own ML for liveness, deepfake and OCR retrained continuously on the attackers' own tools.

Device intelligence, built in
400+ device signals and 40+ rules inside the same SDK — not a bolt-on you integrate later.

Auth + Identity in one platform
The identity proven at onboarding becomes the credential for step-up & adaptive auth — no second vendor.

Trusted at scale
50+ NPS for six consecutive quarters. 30M+ digital IDs, 220+ institutions — it holds up in production.

VIDA's Identity Platform behind every ID verification link

From deepfake detection to document fraud prevention, every check runs in the background so you get certified security without the integration complexity.

- Manual Review
- MyDigital ID, Singpass
- ID FraudShield (Device Intelligence)
- Face Match (1:1)
- Face Blacklist
- 1 : N Face/ ID Deduplication
- Injection Attack detection (IAD)
- Livenes PAD Level 3
- Auto Capture & Doc Forensics Material Check

Key Stats

- >98% OCR accuracy
- 220M+ liveness checks
- 99.9% PAD accuracy
- 1.2M+ attacks stopped
- 99.7% face match
- <15 min fraud decisioning

VIDA

Three capabilities that set us apart

01

Material & Document Check

Advanced document forensics beyond OCR detects physical tampering, reprints, screen captures, and digital manipulation of ID cards. Validates material authenticity of the physical document itself.

02

ID FraudShield

Smart background device intelligence that detects emulators, behavioural anomalies, location spoofing, and session manipulation without adding friction to the user experience. With 400+ signals.

03

MY Digital ID & SingPass

Government-grade identity verification via Malaysia's MyDigital ID (JPN face match) and Singapore's SingPass — integrated natively into the SDK flow. VIDA-powered liveness for maximum accuracy.

eKYC Compliance Four Steps, Under 2 Minutes

1

Document Capture & Material Check

Auto-capture, OCR, forgery & material authenticity check

2

Liveness & Face Match

PAD liveness Level 3, 1:1 face match, injection attack detection (IAD)

3

Device Intelligence Check

400+ device signals and 40+ fraud rules evaluated in real time

4

National ID Check

KTP (Indonesia) MyDigital ID (MY) or SingPass (SG) gov-grade verification

CERTIFICATIONS & LICENSES

Simple Integration

01

Get credentials

API keys from VIDA developer portal. Sandbox included.

02

Install SDK

Gradle (Android), CocoaPods (iOS), or Web SDK.

03

Configure & brand

Configure fraud rules, thresholds, and branding via Configuration Platform no code needed.

04

Go live

Test with real traffic in sandbox, review results together, flip to production.

Ready to prove the person?

Start with one flow. A proof of concept runs four to six weeks, with pass/fail criteria agreed before it begins.
